VI. STATISTICAL SUMMARIES

At build out, the project is likely to approximate the uses, floor areas and intensities represented in Table 12 and the "Illustrative Plan" (see Figure 6 on page 7). Ultimately build-out may be above or below what is described in the Illustrative Plan and Table 12, but is limited by maximum allowable intensities set forth in Table 2 on page 18.

Table 13 summarizes these maximum allowable intensities and the maximum floor areas that

might be permitted. When the maximum intensity is applied to every commercial district, the overall (average) intensity for these districts is a Floor Area Ratio (FAR) of 0.39.
